Installing Mac Os Onto External Hard Drive

You'll boot into your macOS Sierra installation In the Disk Utility tab, select the external hard drive that is connected to the Mac, and then click on Erase at the top.. Once the process completes, click on Done, and you are ready to begin installation.. Oct 15, 2019 Apologies for the video not being the greatest quality, I just wanted to document and share this.. 12 Sierra installed on my Mac mini I cannot download a newer installer from the App Store (strangely enough, it is also not listed in the Purchased section of App Store).. Jun 10, 2017 The hard drive is (of course) formatted as 'Mac OS Extended (Journaled).. Now rename it to something like sierra that you will remember, choose 'Mac OS Extended (Journaled)' in the format and then click on Erase.. To boot from your external Sierra drive, plug it into the Mac in question, press the power button, and hold the "Option key until the recovery disk screen appears.

' I even reformatted it when the installation did not work - does not help Since I have already macOS 10.. From there, you can select your external drive and click the arrow to boot into it for that session.
